

How Big is the New Jerusalem in Heaven?

According to Revelation 21:16 (not all of heaven but just the City alone) will be a cube:
1500 miles wide X 1500 mi. long X 1500 mi. High.

So check this out. Let's say....

1 mile = 1 city block and let's assume every mansion is a 500' cube

1 mi. = 5280 ft. and our gold is figured in Cu. Ft

100 mansions per city block 25 feet of gold streets between every mansion

55' street width around every block. The average American home 2,500 sq.ft.

Lets just go over this a little bit! If your mansion is 500' X 500' X 500' , that makes 250,000 sq. ft. on only the 1st floor. We want nice ceiling heights in your mansion, so lets go with 50' ceilings. Remember you still have 10 floors! This makes a total of 2,500,000 sq. ft. inside your mansion! Lets compare that to the average American home of 2500 sq.ft..... that means you could fit 1000 average homes inside your mansion! Big enough for you! It is for me!

Now lets see how many mansions there are in heaven in this type of a layout! How many miles did we say there was in each direction? 1500? Wow! Then that makes 225,000,000 mansions on level 1 of heaven! WOW!!!! Now, how much air space do you need overhead on the first layer in Heaven? I know the jet airplanes fly around 30-35,000 ft. high and that is only like 7 miles above the earth. So lets just say that you get 10 miles of air space above your level to fly around in, (Hope that is enough for you) that would make 150 levels that are the same size as Level 1!!!! That makes a grand total # of mansions come to 33,750,000,000 (That's Billion)!! I'm Lost already. I bet it takes awhile to visit them all ... what do you think? Well lets see how long it would take..!

If you only visit a mansion for 30 minutes, then go to the next one for 24 hrs a day, 7 days a week for a whole year, you could still only visit 17,532. That isn't many considering you have almost 34,000,000,000 mansions. At this pace it would take you about 1,925,000 yrs to visit your brother/sisters in the Lord! I guess you really might need all eternity to explore that place!

Now let me share with you how much gold would be IN THE streets!

We only need 1' thick, and I mean that is thin when you compare the 500' high mansions that are there.... but that is all I figured!

5280' / mi. 10 X 10 =100 mansions / block

That leaves 280' X 5280 in one direction and 5000 ft. in the other direction. So lets see how much that comes to, are you ready?

Ok... it is 546,210,000,000,000,000 cu.ft. of PURE GOLD just 1' thick. What if we went just 2' thick want the # ... Ok... you read it... My Mind is spinning ok..

now just imagine if it were 2' thick, it would be 1,092,420,000,000,000,000 cu.ft. of Pure gold!

Gold weighs about 75 lbs / cu.ft. Lets say gold is worth \$900/oz. in US Dollars. How much would it cost God to pave his Streets? Ok here you are... it would cost

\$589,906,800,000,000,000,000,000 for the gold - any and all labor to hire the angels to lay it! I have no Idea what the going wage is in heaven, but I bet the angels aren't the cheapest thing around!

Well, I guess you get the picture, We serve a big God! Is there anything to hard for the Lord?
